

**Installation of a Tilt-before-Turn (TbT) handle**

Installing a Tilt-before-Turn (TbT) handle is slightly different from a standard handle because a TbT handle has a direction. Before installation it needs to be set in the right position depending on the opening direction of the window.

**Installation instruction:**

Instruction	Image
<p>Use the square pin of the handle to put the window in from locked to <b>tilt position</b>. To do that, rotate by 90 degrees. Check to see if the window is really in tilt position.</p>	
<p>The TbT handle has a "Turn Mode Unlocked" and a "Turn Mode Locked" state.</p> <p>See on right.</p> <p>Put the handle in the "Turn Mode Locked" state with the key that is supplied with the handle.</p> <p>If you cannot turn the key into the correct locked position, hold the base of the handle and turn the handle by 180 degrees. Try to turn the key again.</p>	<div style="display: flex; justify-content: space-around;"> <div style="text-align: center;"> <p>Turn Mode Unlocked</p>  </div> <div style="text-align: center;"> <p>Turn Mode Locked</p>  </div> </div>
<p>Hold the handle vertical as shown on above.</p> <p>Hold the base of the handle and turn the handle left or right 90 degrees to one of the positions shown on the right.</p> <p>You should not be able to turn the handle more than 90 degrees.</p> <p>Make sure you choose the correct way that corresponds to the opening direction of your window. The handle should point towards the hinge side of the window.</p> <p>The handle should now look like shown on the right.</p>	<div style="display: flex; flex-direction: column; align-items: flex-end;"> <div style="display: flex; align-items: center; margin-bottom: 20px;">  <div style="margin-left: 10px;"> <p>Use for:</p> <p>Window with hinges on left, handle on right</p> </div> </div> <div style="display: flex; align-items: center;">  <div style="margin-left: 10px;"> <p>Window with hinges on right, handle on left</p> </div> </div> </div>

Instruction	Image
<p>Install the handle with the handle horizontal.</p>	<div style="display: flex; flex-direction: column; align-items: center;">  <p style="margin-left: 10px;">Window with hinges on left, handle on right</p>    <p style="margin-left: 10px;">Window with hinges on right, handle on left</p> </div>
<p>You should now be able to turn the handle only between Locked state and Tilt state.</p>	<div style="display: flex; justify-content: space-around;">   </div>
<p>Finish by unlocking the handle with the provided key. Now you should be able to turn the handle vertical upward and thus use the Turn mode of the window.</p>	
<p>If the tilt-before-turn functionality does not work as expected, put the window in tilt position, uninstall the handle, turn the base by 180 degrees and re-install the handle.</p>
